Enterprise Encryption Implementation Service

Simplify and centralize your organization's encryption strategy with our enterprise service, delivering data protection, key management, and compliance support across diverse systems and environments.

As data protection becomes more critical, implementing effective encryption measures is essential for safeguarding sensitive information. Our Enterprise Encryption Implementation Service ensures your encryption solutions are integrated seamlessly and comply with industry standards, offering maximum security.

Without proper encryption implementation, organizations face

Data Breach Risks

Inadequate encryption exposes sensitive data to unauthorized access and cyber threats.

Compliance Issues

Failure to adopt standard encryption practices can result in non-compliance with regulations like GDPR and PCI DSS.

Operational Disruptions

Poorly implemented encryption solutions can lead to system inefficiencies, negatively impacting business operations.

The Value of Doing Enterprise Encryption Right

Successful enterprise encryption implementation delivers clear, measurable benefits:

- ✓ Strong, organization-wide data protection with encryption, tokenization, data masking, and key management strategies tailored to on-premises, cloud, and hybrid environments.

- ✓ Simplified compliance with regulations like GDPR, PCI DSS, HIPAA, and NIST standards through clear cryptographic governance and audit-ready controls.

- ✓ Reduced operational risks by centralizing and optimizing encryption key management and certificate management practices.

- ✓ Increased resilience against internal threats, accidental data exposure, and emerging cryptographic vulnerabilities.

- ✓ Preparedness for future encryption needs, including readiness for post-quantum cryptographic standards without disrupting operations.

Encryption Consulting's Enterprise Encryption Implementation Service ensures encryption is not only deployed but fully integrated, efficient, compliant, and built to scale with your business.

Why Leading Enterprises Choose Encryption Consulting

Trusted by 185+ global customers, including 100+ Fortune 500 companies

Delivered 500+ encryption and cybersecurity projects across 25+ countries

96% customer retention rate driven by long-term encryption advisory partnerships

Achieved 90% customer satisfaction across cybersecurity and cryptographic services

Rated 4.9/5.0 on Gartner Peer Insights for Encryption Consulting services

Led by consultants with 20–30 years of deep expertise in applied cryptography

Built 600+ encryption governance frameworks aligned with GDPR, PCI DSS, HIPAA, NIST, and ISO 27001 standards

Conducted 400+ custom workshops and knowledge transfer sessions, training 5,000+ security professionals

Your Enterprise Encryption Roadmap

Our Enterprise Encryption Implementation Service follows a structured roadmap, guiding organizations from initial assessment to solution design, deployment, and optimization. This phased approach ensures that your encryption environment is secure, compliant, and tailored to your business needs, supporting both immediate priorities and future growth.

Current State Assessment and Gap Analysis

Review existing encryption capabilities, identify security gaps, and assess readiness for advanced encryption technologies.

Requirements Gathering and Workshops

Engage business and technical teams to define encryption use cases, compliance needs, and technical requirements.

Strategy and Roadmap Development

Build a tailored encryption strategy and phased roadmap aligned with business goals and regulatory standards.

Platform Support and Optimization

Deliver post-implementation support, optimize performance, and securely migrate from legacy platforms as needed.

Solution Design and Implementation

Design and implement encryption solutions across environments, ensuring smooth integration and minimal disruption.

Vendor Evaluation and Selection

Develop evaluation criteria, assess solutions, and select the best-fit encryption and key management technologies.

Our Comprehensive Enterprise Encryption Implementation Services

Engage with our full advisory offering or select individual services to fit your requirements.

Service	Key Activities	Key Deliverables
Assessment	• Conduct a comprehensive analysis of the current encryption environment • Identify gaps, vulnerabilities, and readiness for advanced encryption technologies • Assess cryptographic key management, tokenization, and data masking practices	☑ Enterprise encryption assessment report with detailed findings ☑ Gap and risk analysis, including tokenization and data masking readiness ☑ Recommendations for improvement and optimization
Strategy and Roadmap	• Define enterprise-wide encryption, tokenization, and data masking strategies aligned with business, risk, and compliance needs • Prioritize sensitive data assets and critical environments for protection • Build scalable, phased encryption and cryptographic key management programs for future growth	☑ Customized enterprise encryption strategy and roadmap aligned to compliance requirements ☑ Phased implementation plan aligned with business priorities
Vendor Evaluation & Proof of Concept (PoC)	• Create tailored evaluation criteria covering encryption, cryptographic key management, tokenization, and data masking capabilities • Conduct vendor-neutral analysis across leading solutions • Recommend best-fit technologies without vendor bias	☑ Vendor evaluation matrix and comparative analysis ☑ Final vendor selection and PoC report with key management, encryption, tokenization, and data masking considerations

| Service	Key Activities	Key Deliverables
Implementation	● Implement the required solutions (encryption, tokenization, data masking solution) across development, testing, and production environments ● Ensure seamless deployment on the enterprise level ● Optimize performance and compliance readiness ● Integrate encryption solutions with IAM, PKI, and existing security architectures	☑ Fully deployed encryption solution ☑ Deployment runbooks and operational integration guides ☑ System validation and compliance readiness reports
Migration to CipherTrust Manager	● Migrate from SafeNet KeySecure or Vormetric DSM to CipherTrust Manager ● Upgrade to the latest version of CipherTrust Manager ● Leverage advanced capabilities for secure, compliant transitions ● Ensure continuity for cryptographic key management and associated data protection mechanisms	☑ Migration plan and execution reports ☑ Validation of cryptographic key management migration ☑ Post-migration operational support documentation
CipherTrust Manager Support	● Provide deployment, configuration, and ongoing optimization of CipherTrust Manager ● Enable robust cryptographic key management capabilities ● Support operational resilience and compliance through system tuning and updates	☑ CipherTrust Manager deployment and optimization documentation ☑ Health check and maintenance reports ☑ Operational support plan

Our Product Catalogue

Explore our best-in-class encryption and data protection solutions designed to secure sensitive information, simplify compliance, and strengthen your organization's overall security posture.

CipherTrust Manager

Centralize the management of encryption keys across hybrid environments, simplify key lifecycle operations, and protect sensitive data with a trusted, scalable platform.

Protegrity Platform

Protect sensitive data everywhere with industry-leading tokenization, encryption, and anonymization while supporting secure AI innovation and meeting global compliance standards.

Comforte Data Security Platform

Secure sensitive structured data with tokenization and encryption, reduce breach risk, and support digital transformation initiatives without disrupting business operations.

HashiCorp Vault Platform

Manage secrets, encryption keys, and identity-based access across multi-cloud and on-premises environments to safeguard critical applications and minimize security risks.

ENCRYPTION CONSULTING

Building a cyber-secure future together!

Effective encryption strengthens your enterprise, safeguards critical assets, and drives operational confidence. Encryption Consulting delivers tailored, scalable encryption solutions built to meet the demands of modern enterprise business environments.
